

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	30 September 2026
Team ID	MKU201Team66ab4dee00fc666a751b56cd7
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Before you collaborate (10 minutes)

A little bit of preparation goes a long way with this session. Here is what was done before starting.

A. Team gathering

Team members who participated in the session: Amirthavishnu, Gopi, Jeevanantham, Manoj kumar and Desiyan.

B. Set the goal

Focus on solving how record-level access can be restricted using a script-controlled ACL in ServiceNow.

C. Learn how to use the facilitation tools

Use the facilitation superpowers to run a happy and productive session.

Define your problem statement (5 minutes)

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

PROBLEM

How might we restrict users from viewing records unless they meet specific conditions, so that only EEE branch users can view EEE records while administrators retain full access?

Key rules of brainstorming

To run a smooth and productive session

Stay in topic. Encourage wild ideas.

Defer judgment. Listen to others.

Go for volume. If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm (10 minutes)

Write down any ideas that come to mind that address your problem statement.

Amirthavishnu	Gopi	Jeevanantham	Manoj kumar	Desiyan
Create a test user (EEE User)	Custom roles bb1–bb4	Impersonate EEE user to test	Custom table u_institution_details	Data condition: Branch is EEE
Read ACL on the table	Separate ACL per operation	Verify admin sees all records	Branch choice field (ECE, EEE, CSE)	Elevate security_admin role
Script using gs.hasRole	Assign roles to the user	Test user without any role	Add sample records per branch	Restrict on Service Portal too

Group ideas (20 minutes)

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

Users & Roles

- Create test user (EEE User)
- Custom roles bb1–bb4
- Assign roles to the user

Table Design

- Custom table u_institution_details
- Branch choice field (ECE, EEE, CSE)
- Sample records per branch

ACL Rules (Read, Create, Write, Delete)

- Read ACL with Branch is EEE condition
- Script using gs.hasRole
- Separate ACL for each operation
- Elevate security_admin role

Testing & Verification

- Impersonate EEE user
- Impersonate admin
- User without role sees nothing
- Service Portal restriction

Step-3: Idea Prioritization

Prioritize (20 minutes)

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

Importance – If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

Feasibility – Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)
