

Project Design Phase

Problem – Solution Fit Template

Date	30 September 2026
Team ID	MKU201Team66ab4dee00fc666a751b56cd7
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 3-5 y.o. kids ServiceNow administrators who manage institution records, and EEE branch users who should view only the records of their own branch.	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. Admin access and the security_admin role elevation are needed to create ACLs; the roles bb1 to bb4 must be created and assigned first; everything is done inside the ServiceNow instance.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? Role-only ACLs without a data condition, or leaving the records open to every user. Pros: simple to set up. Cons: they cannot restrict records by the Branch value and give no per-branch control.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. Let only EEE branch users view the records where Branch is EEE while administrators keep full access, and control create, write and delete access separately by role.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. There is no script-controlled Read ACL with the Branch is EEE condition on the Institution Details table, and access is not defined for each operation, so users can see records of every branch.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) The admin creates the user, roles, table and ACLs step by step, then impersonates the EEE user and the admin to check what each can see. Users open the Institution Details list from the All menu.	
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Records of every branch are visible to all users, and the student data needs role-based protection.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. Script-controlled ACLs on u_institution_details: a Read ACL (role bb1, data condition Branch is EEE, script that allows admin and bb1 users and denies all others) and Create, Write and Delete ACLs that require the roles bb2, bb3 and bb4.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 Actions in the ServiceNow web interface: User Administration, Tables and Access Control (ACL) forms, impersonating users and opening the Institution Details list from the All menu.	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. Before: worried and concerned about exposing sensitive student data. After: confident and in control, knowing only permitted users can see the records.	8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Not applicable. The solution is used only through the ServiceNow web interface.
